3.INTRODUCTION

Background to the Problem

Freelancing is an interesting and expanding job choice that is becoming increasingly popular in Bangladesh. In exchange for remuneration, you contribute your abilities, skills, and time. It is a work environment in which you are your own boss; you work as much or as little as you like and from wherever you are most comfortable. But it's not all coffee and cakes, especially for freelancers in developing countries like Bangladesh. Freelancers in Bangladesh face some challenges, the most notable of which is that most of our country's credit/debit cards are not internationally recognized and accepted when entering into freelancing sites, preventing Bangladeshi freelancers from creating accounts in PayPal, Payoneer, and other payment systems used by freelance marketplaces. Only because of this, many promising skilled freelancers are unable to register for the freelancing job market in this competitive industry. Second, no comprehensive training program for new freelancers is provided through government effort in our nation; some individual initiatives are observed in the market, but they are not available across the country, just in Dhaka. Third, in order to join the freelancing market, freelancers must have solid verbal and written communication skills in English. Some young people have good academic backgrounds but lack strong showing support in English. So, we proposed a solution to help the freelancer and how to improve freelancer.com service. In the project we showed various resources all can benefit from this project.

Solution to the Problem

It is a web-based application to help freelancer. At the time of ordering a service, employers must provide funds equivalent to the total service price. The payment is protected by the Freelancer Milestone Payment System. Only release the payment once you are 100% happy with the work that has been delivered. At the time of posting a contest, employers must provide funds equivalent to the total contest prize. We have a Money Back Guarantee for this prize money. The Money Back Guarantee entitles you to get your money back for up to 30 days from contest closing if you are not happy with the submitted entries. Simultaneously, many various types of web apps were developed under such situations, but the applications were either connected to certain businesses or could only give information in a restricted geographic area.

4.REQUEIREMNT SPECIFICATION

System Features

Our system is used by mainly three numbers of users. Each user performs a different type of role. For each user, there is a distinct set of requirements.

(I) Dashboard (II) Customer/User **Features for all users:**

1. Login Functional Requirements
1.1 The software shall allow users to login with their given username and password
1.2 Only with the correct username and password can the user login to the system.
Priority Level: High.
Precondition: user has valid user id and password.
2. Registration Functional Requirements
2.1 Every user needs to register then can login to their system.
2.2 By clicking on the register icon and providing some necessary information the users can create an account.
2.3 They have to provide a password, phone and email to verify any code will be sent to email.
2.4 Password and Confirm password must match.
2.5 By providing all information one can confirm their registration.
Priority Level: High.
Precondition: Must provide all information.
3. Password Change Requirements
3.1 Every user needs to login to their system.
3.2 By clicking on the password change and providing some information the users can create an account.
3.3 They have to provide recent password, new password and confirm password.
3.4 new password and confirm password must be match.
Priority Level: High.
Precondition: Must provide recent password, new password and confirm password.
4. Reset Password Requirements
4.1 The software shall allow users to reset password.
4.2 Given the only with correct mail address.
4.3 In mail address system should sent a reset password link.
Priority Level: High.
Precondition: Must provide correct address.
5.Profile update Requirements
5.1 Every user needs to login to their system.
5.2 By clicking on the profile update and providing some information.
5.3 They have to provide Last Name, Fast Name, Location, Phone number,Address.
Priority Level: Low.
Precondition: Must provide information.
6.Adding in the list requirements
6.1 User can add any option in the Lists

6.2. For adding any option user must click in the "New List"

6.3 They have to provide a Name and description. If anyone provides the same name from the list, there will error

6.4 Click the save button

Priority level: High

Precondition: Must provide the Name

7.Deleting from the list requirements

7.1 Select the option from list

7.2 Click on the delete option

7.3 Confirm deleting

Priority level: High

Precondition: No conditions

8.Mail Requirements

8.1 Click on the Email &Notifications

8.2 User must give a new email

8.3 Same email address will show errors.

Priority level: High

Precondition: Provide a new email

9.Browsing for freelancer

9.1 From the freelancer's option, user can find workers

9.2 User will fill up the Filters option by following their requirement

Priority level: High

Precondition: No conditions

5.FEATURES NOT TO BE TESTED

There will be no testing in the database area. Because these applications are entirely under the customer's control and fall beyond the scope of this project. Customers will be given with the database format information they need to extract data. The application developer is responsible for testing their apps.

6.TESTING APPROACH

6.1 Testing Levels

SYSTEM/INTEGRATION: We do system integration testing to guarantee that software module dependencies are working properly and that data integrity is maintained between different modules of the overall system.

ACCEPTANCE TESTING: Finally, we perform acceptance testing to verify whether or not the software system meets the specifications. The primary goal of this test is to assess the system's compliance with business requirements and to confirm that it meets the criteria for delivery to end users.

6.2 Test Tools

Chrome Driver: The Chrome Driver's primary function is to start Google Chrome. We installed it in order to perform our test in Chrome.

Selenium IDE: This technology is used to automate web-based application testing in order to ensure that it works as planned. Selenium is required for the testing strategy.

6.3 Meetings

One of the most important aspects of a successful testing team is assigning the correct assignment to the right individual. So, in order to be a successful team, it is critical to hold frequent team meetings. Our group consists of four people. Several meetings are held during this testing phase to discuss our testing procedure. Some of our members encounter many issues when developing test cases and conversing with others, and we all work together to resolve the issue as soon as feasible. We work together in Microsoft teams .

7.TEST CASES/TEST ITEMS

|	
Project Name: freelancer.com	Test Designed by: Md. Mehedy Hasan Siam
Test Case ID: FR_1	Test Designed date:23/12/2022
Test Priority (Low, Medium, High) : High	Test Executed by: Md. Mehedy Hasan Siam
Module Name: Login Session	TestExecution date: 23/12/2022
Test Title: verify login with valid username and password	
Description: Test website login page	

Precondition (If any): User must have valid username and password	

Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Go to the website 2. Enter username 3. Enter password 4. Click submit	Username: mehedisiam11@gmail.com Password: #siam1234	User should login into the application	As expected,	Pass

Post Condition: User is validated with database and successfully login to account. The account session details are logged in the database.

Fig: After Login Interface

Test Case ID: FR_2		Test Designed date:23/12/2022
Test Priority (Low, Medium, High) : Low		Test Executed by: Md. Mehedy Hasan Siam
Module Name: Login validation		TestExecution date: 23/12/2022
Test Title: verify login with un valid username and password		
Description: Test website login page		
Precondition (If any): Using un valid username and password		

Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Go to the website 2. Enter username 3. Enter password 4. Click submit	Username: sdfghjidddd Password: 1111123ef	After clicking the submit button error massage will be shown for all field that it needs values	As expected,	Pass

Post Condition: The Input user and password should not be store in the database.

Fig: Login Page Validation Interface

Test Case ID: FR_3			Test Designed date:23/12/2022	
Test Priority (Low, Medium, High) : High			Test Executed by: Md. Mehedy Hasan Siam	
Module Name: Registration Session			TestExecution date: 23/12/2022	
Test Title: verify registration with un valid username and password				
Description: Test website registration page				
Precondition (If any): Using valid username/email and password				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Go to the website 2. Enter username /email 3. Enter password 4. Click submit	Username/email: mehedisiam11@gmail.com Password: #siam1234	User should registration into the application	As expected,	Pass
Post Condition: The Input user and password should be store in the database.				

Fig: Sign Up interface

Test Case ID: FR_4		Test Designed date:23/12/2022
Test Priority (Low, Medium, High) : Medium		Test Executed by: Md. Mehedy Hasan Siam
Module Name: Registration Validation		TestExecution date: 23/12/2022
Test Title: verify registration with un valid username and password		
Description: Test website registration page		
Precondition (If any): Using valid username/email and password		

Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Go to the website 2. Select the type 3. Click submit 4. Enter into the registration page 5. Click submit	Give null value to all input fields.	After clicking the submit button error massage will be shown for all field that it needs values	As expected,	Pass
Post Condition: The Input user and password should not be store in the database.				

Fig: Sig Up page Validation

Test Case ID: FR_5		Test Designed date:23/12/2022
Test Priority (Low, Medium, High) : Medium		Test Executed by: Md. Mehedy Hasan Siam
Module Name: Change Password		TestExecution date: 23/12/2022
Test Title: verify change password password		
Description: Test website change password page		
Precondition (If any): User must be logged into the account.		

Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Go to the website. 2.loggin 3.Enter change pass page 4.Enter Currrent Pass,new pass,confirm pass 5. Click submit	Current Pass: #Siam1234 New Pass: #siam1234 Confirm Pass: #siam1234	User should change the password and login into the application	As expected,	Pass
Post Condition: The previous password is change and new password should be store in the database.				

Fig: Password Change Interface

Test Case ID: FR_6			Test Designed date:23/12/2022	
Test Priority (Low, Medium, High) : Medium			Test Executed by: Md. Mehedy Hasan Siam	
Module Name: Change Password validation			TestExecution date: 23/12/2022	
Test Title: Test website change password page validation				
Description: Test website change password page				
Precondition (If any): User must be logged into the account.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Go to the website. 2.loggin 3.Enter change pass page 4.Enter Currrent Pass,new pass,confirm pass 5. Click submit	Give null value to all input fields.	After clicking the submit button error massage will be shown for all field that it needs values	As expected,	Pass
Post Condition: The password is not change and new password should not be store in the database.				

Fig: Password Change page Validation

Test Case ID: FR_7	Test Designed date:23/12/2022
Test Priority (Low, Medium, High) : Medium	Test Executed by: Md. Mehedy Hasan Siam
Module Name: Client Profile session	TestExecution date: 23/12/2022
Test Title: client profile page	
Description: Test website client profile page	

Precondition (If any): User must be logged into the account.				
Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Go to the website. 2.loggin 3.Click client profile page 4.Enter headingline,Summary,hourly 5. Click submit	Headline:JSDeveloper. Summary: I done some project Hourly: 3$	User should update his/her client page informatiom	As expected,	Pass
Post Condition: The user client information should be store in the database.				
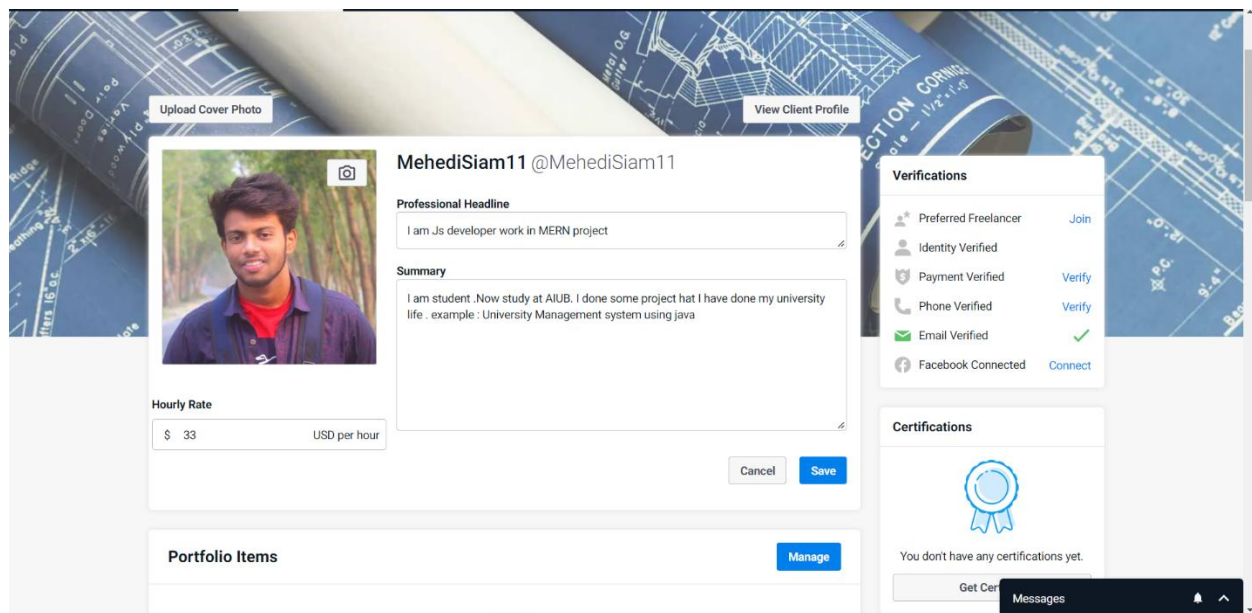

Fig: Client profile interface

Test Case ID: FR_8		Test Designed date:23/12/2022
Test Priority (Low, Medium, High) : Medium		Test Executed by: Md. Mehedy Hasan Siam
Module Name: Client Profile validation		TestExecution date: 23/12/2022
Test Title: client profile page		
Description: Test website client profile page validation		
Precondition (If any): User must be logged into the account.				

Test Steps	Test Data	Expected Results	Actual Results	Status (Pass/Fail)
1. Go to the website. 2.loggin 3.Click client profile page 4.Enter headingline,Summary,hourly 5. Click submit	Give null value to all input fields.	After clicking the submit button error massage will be shown for all field that it needs values	As expected,	Pass

Post Condition: The user client information should not be store in the database.

8. ITEM PASS/FAIL CRITERIA

After all test cases have been successfully completed, some recommendations will be offered. The test's leader will make these decisions depending on the results of the test. The software testing cannot be completed unless its almost bug-free status is confirmed. There will always be some defects in the software system after it has been released in its entirety. As a result, the test leader and project manager will make judgments on whether to release the software and which test numbers will pass. The project manager and test lead are completely responsible. In this example, if 96% of the test cases pass during the testing session, we will proceed with the software release.

9. TEST DELIVERABLES

Acceptance test plan: The user acceptability tests all turned out to be successful. The user interface was easy to use but still efficient.
System/Integration test plan: Every aspect of system integration was done successfully. As a result, the database was operating correctly and all of its features were responsive.
**Screen prototypes:** Total nine prototypes were made and the last system one was the one we used in this project as this was the final latest modification.
Report mock-ups: There were no mock-ups created for the report we are currently reviewing because it is the project report**.**
Defect/Incident reports and summaries: It functions well in circumstances where the project requirements are not fully understood. The process is iterative and based on trial and error between the client and developer.
Test logs and turnover reports: All of module 4's test logs were displayed. All test logs and a turnover report are displayed in the previous section. All of the tests were completed correctly, and none revealed any major problems.

10.TESTING SCHEDULE

Schedule

	Feedback	Completion	Acceptance Testing	Test Plan	Design	Documentation
Start date	24-Dec	23-Dec	21-Dec	20-Dec	19-Dec	18-Dec
days to complete	1	1	2	1	1	1

11. APPROVALS

DEVELOPMENT MANAGER	PASS
TEST MANAGER	PASS
TESTING MANAGER	PASS
